WHY CHOOSE
THE CENTRALIZED SYSTEM

THE GDA GROUP
THE FIRST
SINCE 1974

INNOVATION TO SAVE TIME AND FATIGUE

General D'Aspirazione was founded in 1974, when Fausto Bianchi and his wife Mariagrazia sensed the need of a highly innovative cleaning system, then unknown to the Italian public.

Since then, the central vacuum systems General D'Aspirazione, now known as GDA, have become a well-known reality in every health-conscious environment – from the kitchen to the bedroom.

General D'Aspirazione has one important mission: to improve the air we breath and have more time for ourselves with top-quality central dust vacuum systems.

MAIN DISTINCTIONS FROM PORTABLE VACUUM CLEANERS

3 / 8

TOTAL HYGIENE:

Allergens, micro dust, mites, and smells are directly expelled to the outside of the structure, avoiding their return into the environment as happens with all portable systems.

REDUCTION OF ENERGY CONSUMPTION BY 50%:

This is because the cleaning time is reduced by 30% and environments require less frequent cleaning staying cleaner longer thanks to the expulsion of the filtered air directly outside. Moreover, the consumption of each user is always less than 2 kW, therefore less than below of a normal portable vacuum cleaner.

OPERATING IN TOTAL SILENCE:

Cleaning can be done in total freedom and at any time, even when, in the nearest bedrooms to the point of use, guests are sleeping. This is because the central is soundproof and distant from the place of use.

REDUCTION OF OPERATIONAL COST:

The cost savings occurs both with own staff and with outsourcing, requiring less cleaning time and not having to buy and-or replace portable vacuum cleaners dedicated to the structure, as also accessories and spare parts needed for traditional systems. Usually within the first 2 years of operation, the cost is fully amortized.

MAIN DISTINCTIONS FROM PORTABLE VACUUM CLEANERS

4 / 8

EVERY KIND OF ACCESSORIES:

Indicated for all types of surfaces such as smooth floors and parquet, for curtains and mattresses, for carpets and rugs with the special turbo brush, etc.. it can be vacuumed both dry and wet at the pool / spa area with a special vacuum-liquid accessory.

REDUCTION OF ENERGY CONSUMPTION UP TO 50%:

This is because the cleaning time is reduced by 30%. In addition, thanks to the elimination of suspended micro-dust that would occur as a result of the use of portable vacuum cleaners, the rooms in the common areas, remaining clean for longer, require a lower cleaning frequency.

BETTER CONSERVATION FOR THE INTERIOR:

Not carrying portable vacuum cleaners, you avoid collisions with doors and furniture, that make the furniture look older. The hose can also be equipped with a "sock", hose cover in cotton which avoids any marks due to the rubbing of the hose.

LESS MAINTENANCE IN VENTILATION SYSTEMS:

The air exchange and air conditioning systems require less maintenance because eliminating dust in suspension the filters stay clean longer..
