Pre-Separator Vortex.

Integration with Monoblock and Commercial Units

Vortex is the cyclonic pre-separator that **intercepts over 98% of vacuumed dust**, thanks to the principle of cyclonic motion, without any internal filter requiring cleaning.

Integration with Monoblock and Commercial Central Units

It protects both monoblock and commercial central vacuum units, significantly enhancing the effectiveness of the self-cleaning system in environments with large quantities of fine dust.

It can be integrated into any existing system and is highly recommended in areas where fine dust is collected in significant amounts.

A guarantee of performance and, above all, a significant simplification of maintenance.

Vortex consists of an inspectable cyclonic filtration stage, self-supporting frame, 90-liter dust container with wheels, quick-release handle — all made of painted sheet metal.

General D'Aspirazione
Since 1974 pioneers in the Italian market
in centralized vacuum cleaning sector.

Pre-Separator Vortex.

Integration with Monoblock and Commercial Units

Advantages

- Filtration efficiency exceeding 98%
- Cartridge-free filtration thanks to cyclonic motion
- Self-supporting frame with adjustable feet
- Inspectable cyclonic filtration stage

Included in the package:

- 2 rubber sleeves (D.100)
- 4 metal clamps for pipe connection
- 1 collection bag

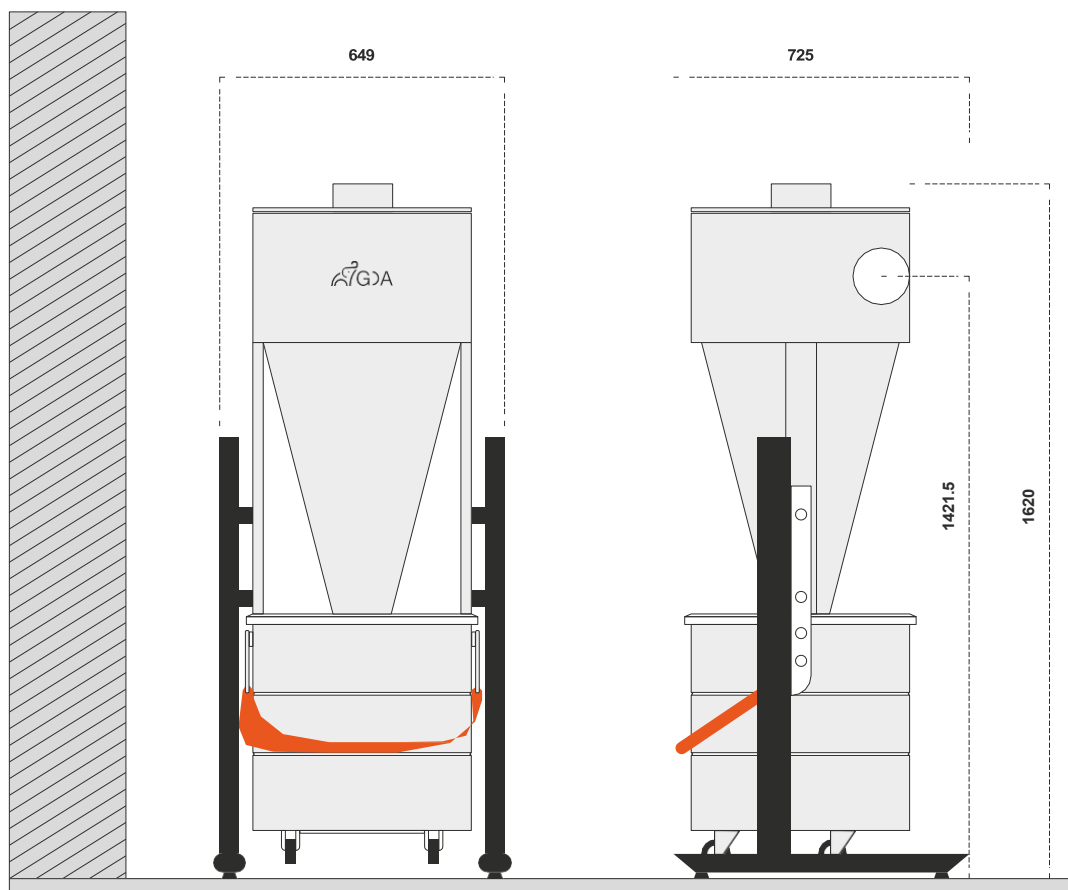

Pre-Separator Vortex.

Integration with Monoblock and Commercial Units

Technical information.

Dimensions		Mod. P-S. Vortex
Height	mm	1620
Width	mm	649
Depth	mm	725
Weight	kg	50
Inlet/Outlet Diameter	mm	100
Container Capacity	L	90

Installation Note: Check and integrate the piping and fittings connecting to the central vacuum unit according to the actual layout of the individual components.

Vortex paired with Monoblock Central Unit
